

Pedaling monitor sensor Compatible Bottom Bracket List SGY-PM010H

This list is based on Pioneer Internal Research and is intended for bicycle dealers only as a guide.

This does not guarantee compatibility with any particular frame.

Even for models where Compatibility is Confirmed, differences in frame size and attached parts may render a particular bicycle incompatible.

Be sure to confirm the actual bicycle compatibility at the dealer before placing an order.

As of 2014/12/4

Notes

For HOLLOWTECH II, BB30, PF30 and other Wide-Hangar (68mm/70mm) Frames, Compatibility Possibility is High, but this depends on accessories and frame shape.

For BB86, BB386 type frames with wide Hangars, the Sensor may come in contact with the frame, and for this reason they are not compatible.

If Di2 batteries or Direct Mount Brakes are located under the ChainStay, these may come in contact with the sensors.

Changing the position of the batteries may enable Installation.

The System Warranty applies only when used with Standard Shimano Chain Rings. Any problems caused by using other chain ring are not covered by Warranty

Use of non standard chain rings including oval chain rings can lead to incorrect operation.

Use of non standard chain rings including oval chain rings can lead to chain ring bolts coming into contact with the frame.

This list is subject to change without notice.

Corrections to this list should be reported using the Email Contact Form on the Pioneer Support Page
